

ABSTRACT

The present invention provides phenol derivatives represented by the following general formula

- 5 or pharmaceutically acceptable salts thereof, or prodrugs thereof, which exhibit an inhibitory activity in human SGLT and are useful as agents for the prevention or treatment of a disease associated with hyperglycemia such as diabetes, postprandial hyperglycemia, impaired glucose tolerance, diabetic
- 10 complications, obesity or the like, and pharmaceutical compositions comprising the same, and pharmaceutical uses thereof. In the chemical structure, R^1 and R^2 represent H, OH, NH_2 , etc.; R^3 and R^4 represent H, OH, a halogen atom, an optionally substituted alkyl group, etc.; ring A represents an aryl group
- 15 or a heteroaryl group; G represents a group represented by the following general formula (G); E^1 represents H or F; and E^2 represents H, F, or a methyl group, etc.
